

Signatics Job Opening

SIGNATICS provides indigenous, state of the art, communication and signal intelligence solutions in Pakistan. The company has developed an extensive lineup of SDRs, embedded platforms, base-band and RF hardware with applications in data links, spectrum monitoring, and various other products. For details, please visit <https://www.signatics-solutions.com/>

We have openings for Electrical/Electronics/Computer Engineering graduates with background in

- Digital design and embedded systems (Embedded Systems Engineer)
- Digital signal processing and wireless communications (Wireless Systems Engineer)
- Electronics (Hardware Engineer)

Both upcoming graduates and past graduates are eligible to apply.

Location: Islamabad.

Job description for each opening is given below.

Job Description: Embedded Systems Engineer

Electrical/Computer engineer (BE/MS) with good knowledge of embedded systems. Ideal candidate will be someone with hands-on experience in embedded systems, C/C++, Verilog, FPGAs, IO standards like Ethernet/USB/UART etc., good debugging skills, and working knowledge of general lab equipment like oscilloscope, spectrum analyzer etc.

As an Embedded Systems Engineer, you will be working on bringing up FPGA and Microprocessor firmware IPs for Signatics platforms. You will be part of Firmware development team that works in Verilog and C/C++ to bring up data interfaces and peripherals connected to FPGA and ARM processors.

Job Description: Wireless Systems Engineer

Electrical/Computer engineer (BE/MS) with good knowledge of DSP and/or digital communications. Ideal candidate will be someone with FYP/Thesis in digital communications or signal processing and working knowledge of system modeling in MATLAB/LabView or equivalent. Experience in design of wireless modems, signal processing in receivers like timing/carrier recovery, equalization, error control coding will be a plus.

You will be part of wireless systems engineering team that works on design, simulation, and FPGA implementation of signal processing algorithms for wireless communication systems. You will design signal processing algorithms for Signatics wireless products like data links, spectrum monitoring, wireless modems etc. After design and simulation, you will also implement the algorithms on FPGA.

Job Description: Hardware Engineer

Electrical engineer (BE/MS) with good knowledge of basic and power electronics. Ideal candidate will be someone with FYP in electronic design with working knowledge of general lab equipment like oscilloscope, spectrum analyzer etc.

You will be part of Hardware design and development team that works on PCB design, design verification, hardware testing and QA. As a hardware engineer, you will be working with PCB design tools on baseband and RF PCB designs, design verifications of PCB designs and prefab QA, post fab testing and QA.

Hiring Process

On-campus written screening test will be conducted. Venue and date/time will be announced at a later time. Separate questionnaires will be provided for each engineering position covering the following domains:

- C/C++, Verilog / Digital System Design for Embedded Systems Engineer
- Digital Signal Processing and Wireless Communications for Wireless Systems Engineer
- Electronics Design, Power Electronics for Hardware Engineer

Based on the screening test results, shortlisted candidates will be called for interviews.

Compensation/Benefits:

Candidate will go through an interim/evaluation period of 3-6 months. If deemed suitable, the candidate will then be hired full-time. The compensation details during the interim period and the full-time period are given below

Interim Period

- Salary: 75k per month for fresh graduates. For experienced professionals, the salary will be based on their experience and skillset.

Full-time

- Starting Salary: 150k per month for fresh graduates. For experienced professionals, the salary will be based on their experience and skillset.
- Increment: Annual, performance based
- Bonus: Annual, performance based
- Health Insurance for full-time employees and their family
- Transportation to/from office
- 600 cc car on 1st promotion, and 1200 cc car on 2nd promotion
