

Ayesha Khalid

Islamabad, Pakistan

03295099200 — ayeshakhalid.codes@gmail.com — LinkedIn — GitHub

EDUCATION

FAST University, Islamabad

Aug 2022 – May 2026

B.Sc. in Software Engineering

Relevant Coursework: Data Structures, Algorithms, Artificial Intelligence, Systems Programming, DBMS, Generative AI, Software Architecture

EXPERIENCE

GenAI Engineer (Freelance – Upwork)

2025 – Present

Generative AI & Deep Learning Engineer

- Built and fine-tuned transformer-based deep learning models.
- Implemented Generative AI solutions using LLM APIs and vector databases.
- Developed end-to-end AI pipelines from preprocessing to deployment.
- Integrated AI models into scalable web applications using REST APIs.
- Applied MLOps practices for deployment, monitoring, and optimization.

Data Analyst Intern (Mentorness – Remote)

2024

Data Analyst

- Analyzed and cleaned large datasets using Python (Pandas, NumPy).
- Created data visualizations and dashboards using Matplotlib and Seaborn.
- Performed exploratory data analysis (EDA) to identify trends and insights.
- Assisted in building data-driven reports to support business decisions.
- Worked with SQL for data extraction and analysis.

PROJECTS

HR Automation System (FYP) — React, VectorDB, Python

2025–2026

- Automated recruitment and employee workflows using ML-driven systems.
- Implemented authentication, role-based access, and Firebase storage.

Historical Image Reconstruction — Real-ESRGAN, DeOldify

2024

- Enhanced and restored historical images using AI-based super-resolution.
- Applied DeOldify for realistic colorization of black-and-white images.

PixelRNN Image Completion System — TensorFlow, Keras, Streamlit

2025

- Implemented a PixelRNN-based deep learning model for image completion using occluded images as input.
- Trained the model to reconstruct missing or occluded regions using original images as ground truth.
- Experimented with architectural and training optimizations to improve reconstruction quality.
- Evaluated model performance through visual comparison of reconstructed and original images.
- Developed an interactive Streamlit-based UI allowing users to upload occluded images, view reconstructed outputs, and compare results.

DevOps Deployment Pipeline — Docker, Kubernetes, Jenkins

- Built CI/CD pipelines and deployed containerized applications.

TECHNICAL SKILLS

Web: MERN Stack, HTML, JavaScript, Tailwind CSS, REST APIs

AI/ML: Machine Learning, Neural Networks, TensorFlow, Flask

GenAI: LLMs, Transformers, GANs, LSTMs, Vector Databases

DevOps: Docker, Kubernetes, Jenkins, Git, Linux, CI/CD
