

Technical Support Associate

Industrial Wireless Networks & Automation Support

Application Deadline: April 30, 2026

Company	Clover IQ (Dallas, TX, USA)
Location	Pakistan (Remote) – Serving North American Clients
Work Hours	Aligned with CST/EST Business Hours
Experience	1-3 Years (Fresh Graduates with Strong Aptitude Welcome)
Reports To	Senior Network Engineer
Employment Type	Full-Time
Department	Engineering & Delivery

ABOUT CLOVER IQ

Clover IQ is a vendor-agnostic industrial wireless systems integrator based in Dallas, TX. We design, deploy, and manage Private 5G/LTE, Wi-Fi 6/7, connected worker, and OT cybersecurity solutions for Oil & Gas, Chemical Manufacturing, Energy, and Utilities clients across North America. Our vendor ecosystem includes Nokia, Motorola, Cisco, Digi, Axis, i.safe MOBILE, Getac, Honeywell, and others.

ROLE OVERVIEW

As Technical Support Associate, you will be the first line of technical response for Clover IQ's deployed networks and client environments. Working alongside the Senior Network Engineer, you will monitor network health, troubleshoot issues, manage support tickets, and help maintain the operational excellence our North American clients expect. This is a learning-intensive, multi-hat role – you will gain hands-on exposure to Private 5G/LTE, Wi-Fi 6/7, industrial IoT, and OT environments while building the skills to grow into a full network engineering role. You will also support internal automation, documentation, and vendor coordination tasks.

KEY RESPONSIBILITIES

Network Monitoring & Tier 1/2 Support

- Monitor deployed Private 5G/LTE and Wi-Fi networks across client sites using vendor dashboards (Nokia DAC, Cisco, Digi)
- Respond to client support tickets and alerts within SLA timelines, performing initial triage and diagnosis
- Troubleshoot connectivity, RF performance, device provisioning, and gateway issues remotely
- Escalate complex issues to the Senior Network Engineer with clear documentation of symptoms, steps taken, and diagnostic data
- Maintain detailed ticket logs and resolution notes for every support interaction

Deployment Assistance

- Assist the Senior Network Engineer with remote deployment tasks: device configuration, SIM provisioning, firmware updates, and acceptance testing

- Prepare pre-deployment checklists, equipment inventories, and shipping coordination for client site work
- Configure and test industrial IoT gateways (Digi IX40), rugged devices (Getac, i.safe MOBILE), and video surveillance equipment in lab/staging environments
- Support field engineers and contractors during on-site deployments via remote coordination

Documentation & Knowledge Management

- Create and maintain technical documentation: network diagrams, configuration guides, troubleshooting playbooks, and standard operating procedures
- Keep internal knowledge base current with lessons learned, vendor updates, and resolved issue patterns
- Document client network topologies, device inventories, and configuration baselines
- Assist with site survey report preparation, data entry, and deliverable formatting

Automation & Internal Tools

- Support and extend internal automation scripts and workflows for network monitoring, alerting, and reporting
- Help maintain and improve CRM data (HubSpot), project trackers, and internal dashboards
- Assist with vendor portal management: ISNetworkworld compliance, training records, certification tracking
- Manage device asset tracking, warranty records, and inventory databases for client deployments

Vendor & Client Coordination

- Coordinate with vendor TAC teams (Nokia, Cisco, Digi, Motorola) for RMAs, firmware issues, and technical escalations
- Schedule and track vendor support cases through to resolution
- Communicate professionally with North American clients on support status updates and maintenance windows
- Support spectrum licence compliance tasks: data collection, CSV preparation, and filing coordination (ISED, FCC)

REQUIRED QUALIFICATIONS

- Bachelor's degree in Telecommunications, Computer Science, Electrical Engineering, IT, or related field
- 1-3 years of experience in technical support, NOC operations, or network administration (fresh graduates with strong lab/project work considered)
- Foundational knowledge of IP networking: TCP/IP, DHCP, DNS, VLANs, routing basics
- Familiarity with wireless networking concepts (Wi-Fi, cellular, RF fundamentals)
- Comfortable working with command-line tools, SSH, and basic scripting (Python or Bash)
- Strong troubleshooting methodology and attention to detail
- Excellent written English – you will document everything and communicate with North American clients and vendors daily
- Good verbal English for client calls and vendor coordination
- Ability to work CST/EST-aligned hours from Pakistan
- Self-motivated with strong organizational skills – comfortable managing multiple priorities in a lean team

PREFERRED QUALIFICATIONS

- CCNA, CompTIA Network+, or equivalent networking certification
- Exposure to Private LTE/5G concepts or cellular network architecture
- Experience with network monitoring tools (PRTG, Nagios, Zabbix, or vendor-specific dashboards)
- Familiarity with industrial protocols: SCADA, Modbus, WirelessHART, or ISA100
- Experience with ticketing systems (Jira, ServiceNow, Freshdesk, or similar)
- Basic knowledge of Linux server administration
- Experience with automation tools: Python scripting, API integrations, or Power Automate
- Prior experience in a managed services, ISP, or telecom NOC environment
- Familiarity with rugged/industrial devices (Getac, i.safe MOBILE, Zebra)

WHAT WE OFFER

- Accelerated learning path in Private 5G, industrial IoT, and OT cybersecurity – technologies most engineers don't encounter until mid-career
- Direct mentorship from the Senior Network Engineer and hands-on exposure to live client environments
- Vendor training and certification sponsorship (Cisco, Nokia, CompTIA, and others)
- Clear growth trajectory into a Network Engineer role as you build expertise
- Flexible remote work environment in a small, high-impact team
- Competitive compensation aligned with experience and market rates
- Opportunity to work with marquee North American energy and chemical companies

HOW TO APPLY

Send your resume and a brief cover note to ahmed@cloveriq.com with the subject line “**Technical Support Associate – [Your Name]**”.

Please include details of any networking labs, projects, or certifications you have completed.

Applications close on April 30, 2026. Early applications are encouraged.

Clover IQ is an equal opportunity employer. We celebrate diversity and are committed to creating an inclusive environment for all team members.
